PROFILE

Full-Stack Developer with 2+ years of experience on a production e-commerce platform. I work across the whole stack — PHP/PrestaShop and MySQL on the server, JavaScript/TypeScript and React on the client — focusing on performance, technical SEO and integration between e-commerce and internal business systems. Currently the technical point of reference for a team of 3 developers working in an agile setup.

EXPERIENCE

Full-Stack Developer

ItalianGres S.r.l. | Feb 2024 – Present

PrestaShop e-commerce — PHP, JavaScript, MySQL, Python

- Build and maintain front-office and back-office features for the company e-commerce, from analysis through to production release.
- Took the site to **100/100 Lighthouse in Accessibility, SEO and Best Practices, and 90–95 in Performance**, working on semantic markup, structured data, asset optimisation and Core Web Vitals.
- Designed and built the **integration between the PrestaShop store and the on-premise warehouse management systems**: Python services that sync stock levels and export product data in the formats required by industrial software (label printing, warehouse handling), removing manual handovers between departments.
- Technical point of reference for a team of 3 developers in an agile workflow: technical decisions and development priorities.

Software Developer — Internship

expert.ai | Mar 2017 · Apr 2018 · Sep – Nov 2019

- Built an IntelliJ plugin providing syntax highlighting for the company's proprietary file formats (Java).
- Contributed new features to Cogito, the company's semantic AI engine.

PROJECTS

Sophon — collaborative platform for scientific research (BSc thesis)

University of Modena and Reggio Emilia | Mar – Sep 2023

Python, Docker, Nextcloud

- Built the platform's entire infrastructure on Nextcloud, enabling research projects to be stored and shared in a cloud self-hosted by the institution.
- Implemented in-platform notebook execution and the sharing and permissions system across users and research groups.

Personal portfolio — devmanfre.netlify.app

Personal project | 2023 – 2024

Next.js, TypeScript, Tailwind CSS

- Bilingual (IT/EN) static site integrating the GitHub API to display activity and repositories in real time.

TECHNICAL SKILLS

Frontend JavaScript, TypeScript, React, Next.js, HTML, SCSS, Tailwind CSS

Backend PHP (PrestaShop), Python, Node.js, REST APIs

Database MySQL

DevOps & Tooling Git, Docker, Linux

Ways of working Agile, code review
